A chained image display apparatus having a mutual examining function ~~by which a~~where
a plurality of image display apparatuses, controlled by a central control unit and connected in
series, recognize ~~any~~ interruption of power supply to ~~one of the~~an plurality of image display
apparatuses and ~~inform~~correspondingly notify the central control unit. The chained image
display apparatus ~~having a plurality of image display apparatuses connected in series and~~
~~controlled by a central control unit~~may includes a control signal driving unit converting a control
signal inputted to the image display apparatuses into a control signal having a predetermined
level and buffering the control signal having the predetermined level, and an examining unit
transmitting an alert signal, in response to a power supply to an image display apparatus among
the plurality of image display apparatuses being interrupted, to next and previous image display
apparatuses which are connected to the image display apparatus to which the power supply was
interrupted, indicating that the power supply to the image display apparatus is interrupted.
